

OIL CHECKED NOW TUNE YOUR ENGINE!

Easy health tips to keep your mind and body running smoothly.

CHOW DOWN

Go for healthier alternatives: nuts instead of potato chips, whole-grain bread instead of white bread, a side salad instead of french fries.

MOVE THAT BODY

Exercise can perk you up BIG TIME! Walking briskly for 30 minutes makes your body release mood-lifting hormones, while also combating negative thoughts and feelings.

YOU SNOOZE, YOU WIN

Get between 7 and 9 hours of sleep a night and so many everyday things get better: your mental sharpness, memory, mood and self-control.

KICK BUTTS

We all know it's bad...blah, blah, blah. But did you know that quitting smoking significantly lowers your risk of erectile dysfunction and low testosterone? Yep, it's time to quit smoking.

LIVE IT UP WITH LESS BOOZE

You don't have to give up beer, wine or your favourite cocktail to stay healthy. You just need to keep it to 15 drinks a week and no more than 3 a day, with at least two booze-free days each week.

Glossary

Abdominal Ultrasound: One-time only at age 65. Check for abnormalities which may be more common in men with a history of vascular disease or testosterone deficiency. Frequency based on risk factors – discuss with doctor.

Blood Pressure: High blood pressure (hypertension) has no symptoms, but can cause permanent damage to body organs.

Blood Test & Urinalysis: Screens for various illnesses and diseases such as cholesterol, blood sugar, kidney or thyroid dysfunction before symptoms occur.

Bone Health: Bone mineral density test. Testing is best done under the supervision of your physician.

Colon Health: FIT/FOBT* (*as per your doctor's recommendation/ provincial guidelines). Screens for microscopic amounts of blood that can be the first indication of polyps or colon cancer.

Dental Health: Regular cleanings and screenings for issues such as cavities and signs of cancerous lesions in the mouth.

Eye Health: Regular eye exams keep track of eye health and prevent issues from developing.

What to check and when:

- Blood pressure **Yearly**
- Blood test & urinalysis **3 years**
- Colon health **Ask doctor**
- Dental health **Yearly**
- Eye health **3 years**
- Flu shot **Yearly**
- Mental health **As appropriate**
- Measles, Mumps, Rubella vaccine booster **Once – Ask doctor**
- Periodic health exam **3 – 5 years**
- Prostate health **4 years**
- Sexual health **As appropriate**
- STI's **As appropriate**
- Skin self-exam **Yearly**
- Testicle self exam **Yearly**
- Tetanus & Diphtheria vaccine booster **10 years**
- Testosterone **Ask doctor**
- Whooping Cough vaccine booster **Once – Ask doctor**

HPV Vaccine: May be administered to men aged 27 and under – discuss with doctor.

Mental Health: Check for signs of depression. Discuss with family, friends and a healthcare professional.

Measles, Mumps, Rubella (MMR) Vaccine Booster: Is recommended for adults born in 1970 or later who do not have a history of mumps disease – discuss with doctor.

Periodic Health Exam: Review overall health status, perform a thorough physical exam and discuss health related topics.

Prostate Health: Digital Rectal Examination, PSA and testosterone blood test: Prostate Specific Antigen is produced by the prostate. Levels rise when there is an abnormality such as an infection, enlargement or cancer. Testing should be interpreted by a specialist. Men with risk factors (obesity, family history, high fat diet, elevated PSA in his 40's) should be examined every 1 to 2 years and others less frequently.

Pneumovax Vaccine: Once at age 65. Discuss with doctor.

Sexual Health: Diminished or loss of erections or libido, or abnormalities of the genitals, should be reported to

What to check and when:

- Testosterone **Ask doctor**
- Whooping Cough vaccine booster **Once – Ask doctor**

your doctor as they may be due to underlying illnesses such as diabetes, atherosclerosis, depression, prostate illness and smoking.

Sexually Transmitted Infections (STI's): Sexually active adults who consider themselves at risk for STI's should be screened for syphilis, Chlamydia, HPV, etc.

Shingles Vaccine: Individuals over 50 years of age should be offered the vaccine. Discuss with your doctor.

Skin Self Exam: To look for signs of changing moles, freckles, or early skin cancer.

Testicle Self Exam: To find lumps in their earliest stages.

Testosterone: Symptoms include low sex drive, erectile dysfunction, fatigue and depression. All it takes is a simple blood test.

Tetanus & Diphtheria Vaccine Booster: Diphtheria spreads from person to person from coughing or sneezing. Tetanus-causing bacteria enter the body through cuts, scratches, or wounds. Tetanus (Lockjaw) causes painful muscle tightening and stiffness, usually all over the body.

Whooping Cough (Pertussis) Vaccine Booster: Individuals should be immunized against pertussis at least once as adults.
